## High Speed Band Sealer MPS 14000

The MPS 14000 has been designed to seal every style of pre-made and heat sealable bag on the market.

Whether you require a high speed sealer or a machine that can seal heavy duty bags (gusseted, multi-wall, thick laminates, etc.) at production speeds, this equipment can handle the job.

The Emplex MPS 14000 High Speed Band Sealer uses 25 inches of heat and 10 inches of vortex air cooling. Its variable speed can reach up to 1500 inches per minute.

This bag sealer has enough capacity to seal heavy duty bags of any style (gusseted, multi-wall, laminates, etc.) or any heat sealable material where through put is the top priority.

As a standard feature, this machine comes with a removable sealing module that allows the operator quick change of Teflon bands as well as quick access for cleanout and preventative maintenance. As with any Emplex sealer, add on options such as conveyors, trimmers, and coders are all available.

Unique features of the MPS 14000 include:

- A removable sealing module, which virtually eliminates downtime
- Add on options such as coders, bag top trimmers and conveyors
- Sealing head mounts for both horizontal & vertical operation with an crank adjustable range to operate in both horizontal and vertical positions
- Digital control of all individual sealing parameters; heating & cooling temperatures, pressure and speed
